

Meridian BioLabs — Assay Research Summary 202

Meridian BioLabs develops diagnostic assays for clinical laboratories. The organisation operates from Boston, Massachusetts, and this summary reports internal validation results for its rapid-panel programme.

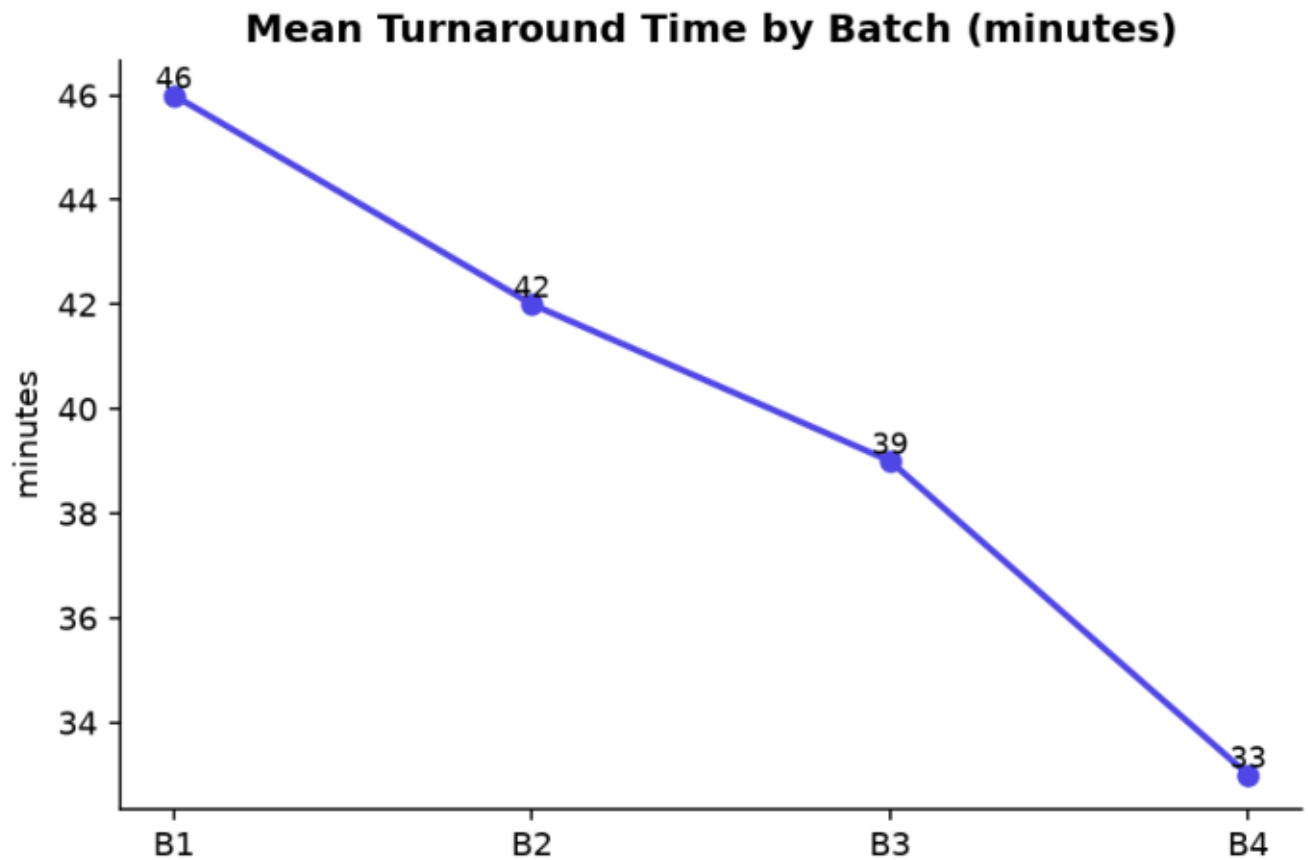

All measurements are from controlled bench studies. Figures describe assay sensitivity and turnaround performance across sample batches.

Assay Sensitivity by Panel (%)

Sensitivity varied by panel design, with the highest result from the redesigned reagent mix.

Mean Turnaround Time by Batch (minutes)

Turnaround improved across batches as the automated liquid handling step was tuned.

Validation Cohort Summary

Validation Cohort Summary

Panel	Samples	False positives
Panel A	1,200	14
Panel B	1,050	31
Panel C	1,340	9
Panel D	1,110	22

Cohorts were drawn from de-identified residual samples across three partner sites.
