

Nimbus Cloud — Q4 Platform Metrics 2025

Nimbus Cloud provides a managed data-streaming platform for engineering teams. The company is based in Austin, Texas, and serves customers across financial services, gaming and logistics.

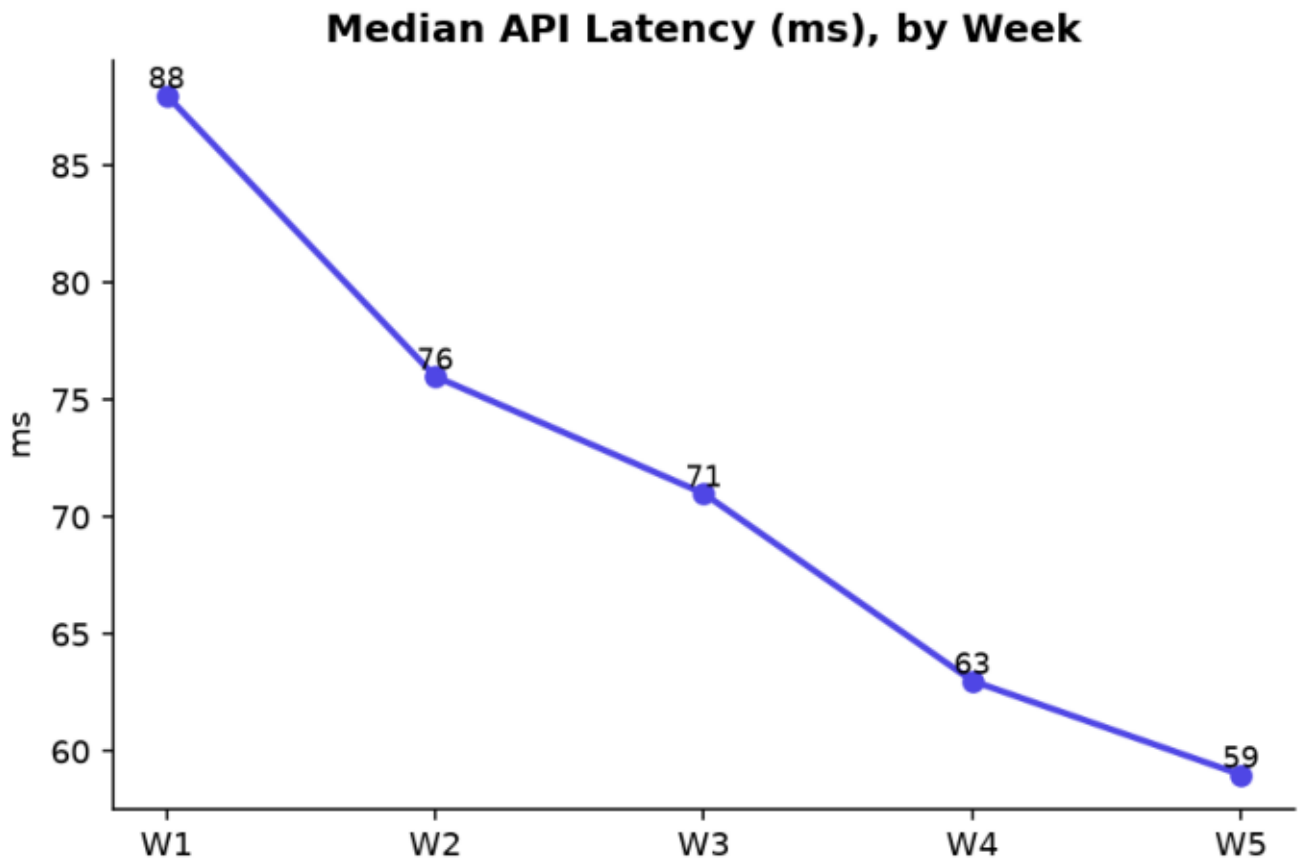

This quarterly update summarises platform usage and reliability. The engineering organisation prioritised ingestion throughput and reducing cold-start latency for serverless connectors.

Monthly Events Processed (billions), Q4

Event volume climbed through the quarter as new logistics customers onboarded ahead of peak season.

Median API Latency (ms), by Week

Latency improved week over week following the connector cold-start optimisation.

Reliability by Service Tier (Q4)

Reliability by Service Tier (Q4)

Tier	Uptime (%)	Incidents
Enterprise	99.98	1
Business	99.94	3
Developer	99.90	6

Higher tiers benefited from isolated capacity and priority failover during the peak period.
